

Weekly Learning Reflections

Week Beginning:

Good afternoon class Astute and families!

Another busy week comes to an end and as ever we have been working hard.

We had our first music lesson this week with Mr Johnson. We learnt about the history and structure of a Ukulele as well as how to hold it. The children very much enjoyed playing our first few songs focusing on strumming and tapping along to the beat. Myself and all the children are excited to continue developing our skills.

Our project work has seen us beginning to look at the structure of our planet and what is beneath our feet. We looked at the different layers and was fascinated by them – especially when we discovered the inner core to be a whopping 5,000 degrees hot! We then explored tectonic plates and how mountains are formed. This ties in nicely with our work in science this week as we discovered how fossils are formed and resurface after thousands of years.

On top of this we have had a busy week learning about different lines and angles in our shape unit in maths and learning all about a computer's input and output systems – ready to create a PowerPoint presentation to share our knowledge next week.

And now, our stars of the week...

Teacher star of the week goes to Finley for embracing the learning value of perseverance and channelling this into all subjects! His determination, focus and effort has not only been noticed by myself, but the rest of class Astute too. Well done Finley!

Class star of the week goes to Noa! The children chose Noa for her positive attitude towards her learning, showing kindness and consideration to others while also being an excellent independent learner. Well done Noa!

Hope that you all have a lovely weekend,
Miss Lamonte
